

Use Cases

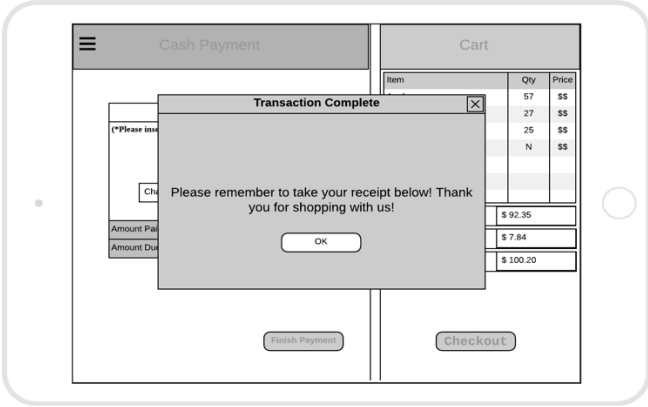

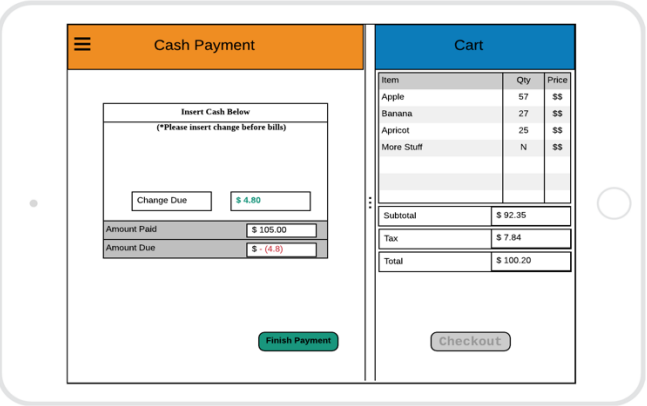

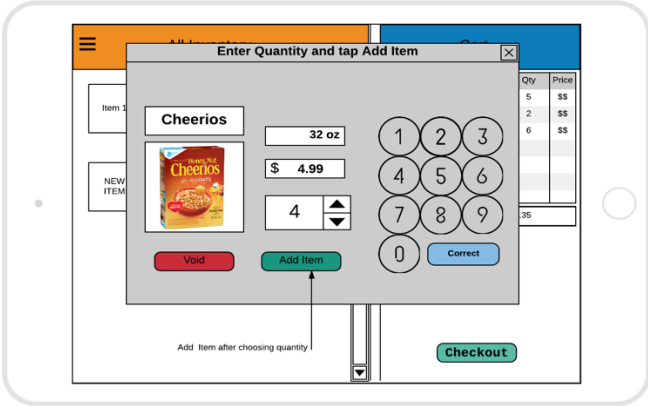

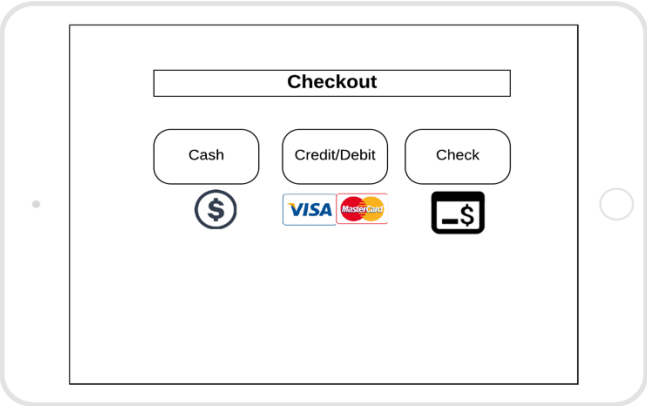

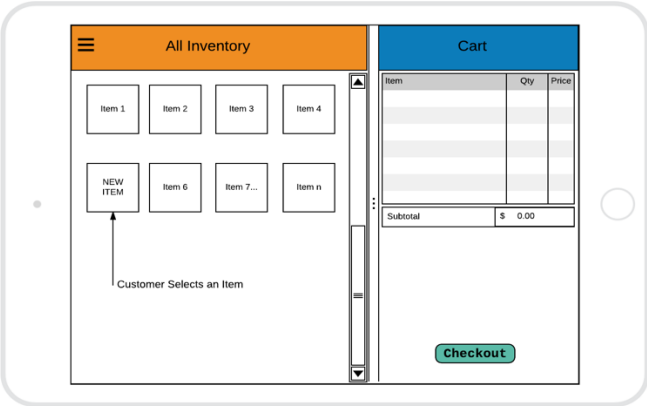

Story 1: As a user, I want to check out an order in store for a customer

Actors: User

Pre-conditions: Customer has selected the items they want to buy and is ready for checkout

Goals: Check out an order for a customer

User Action	System Response
Step 1: Select the item the user wants to purchase or scan the item with a barcode scanner	Step 2: Make a window appear with a text field inside it asking for the user to enter the quantity of that item
Step 3: Enter the quantity of that item and click "Add Item". If its a produce item like apples or broccoli, weigh the item on the scale and enter the mass of the item in the text field.	Step 4: Add the item, its quantity, and the total price to a visible table on the computer screen so both the user and the customer can see the list of items that have been ordered so far.
Step 5: Repeat steps 1-4 for all items in the customer's order. Once all items have been entered, click "Checkout".	Step 6: Navigate to the next page asking for the user to enter cash, debit/credit card, or check
Step 7: Select a form of payment: 7a: Credit/Debit Card 7b: Cash 7c: Check	Step 8: 8a: Display "Insert or Swipe Card" on screen 8b: Display "Cash Payment" screen 8c: Display "Check Payment" screen
9a: Insert or swipe card 9b: Enter cash/check amount and click "Finish Payment"	10a: Display "Signature" screen 10b: Update revenue in the database from the amount of cash received and display "Transaction Complete!" and print receipt
11a: Sign signature and click "Finish"	12a: Update revenue in the database from the amount signed to receive from debit/credit card and display "Transaction Complete" screen and print receipt

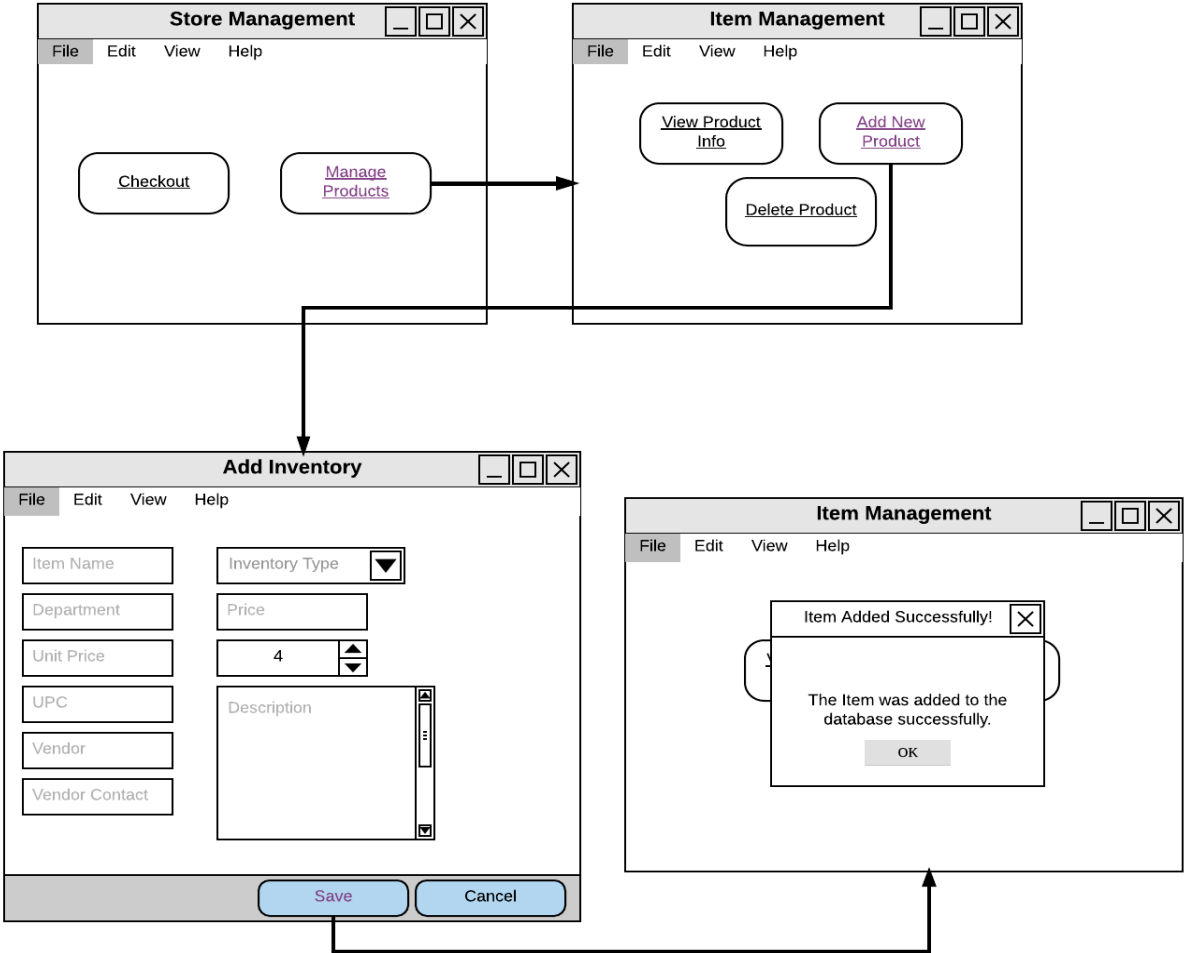

Story 2: As a user, I want to add a new product into the system

Actors: User

Pre-condition: Item is not in system

Goals: Add a new product into the new system

User Action	System Response
Step 1: On the main page, click "Add New Product"	Step 2: Navigate to the "Add New Product Page"
Step 3: Enter the appropriate information for the following fields: Name of Product Product's Barcode Number (if applicable) Initial Number of Available Units Price Per Unit Provider Name Provider Contact Info then click "Add Product"	Step 4: Save each field entered by the user into a "Product" object and add the object into a Product database. Output a message to the user saying that the product has been saved.

Story 3: As a user, I want to update information (e.g., price, available quantity) of a current product in the system.

Actors: User

Pre-condition: Product exists in database

Goals: Update product information

User Action	System Response
Step 1: On the main page, find the product the user wishes to update in a table of products and click the "Edit" button.	Step 2: Because the button stores the id of that specific product, use the ProductID to pull all of the information about that product from the Product database. While navigating to the "Edit Product" page, fill the fields on the page with appropriate information stored in the database.
Step 3: On the "Edit Product" page, change any of the fields on the page that the user wants to update about the product, then click "Update".	Step 4: With the information entered by the user and the ProductID provided, find the product being updated in the database using the ProductID and update the databases information with the information provided by the user. Output a message saying the information has been updated.
